Residual Hypo Test

It is requested that the enclosed film samples, from reels identified below be given a test to determine whether the residual hypo content does not exceed 0.005 mg per square inch.

Samples included represent strips taken from Recordak panchromatic, without opaque backing, microfilm.

It will be appreciated if your statement will list the test result of each strip individually.

Encl:

Fourteen strips of film

GJK:pj(10 March 1953)
